REDISCOVER YOUR BEAUTY WITH FACIAL AND BODY SCULPTING

Our face is the first to be affected by visible signs of ageing. The effects of time, sun exposure, stress, and tobacco quickly show through on our skin. Our complexion is dulled, our cheeks and eyelids begin to droop, and wrinkles start to appear. Our body is not immune to this reality, and our silhouette is gradually transformed as little by little, weight gain and cellulite appear. Fortunately there is a solution to these cosmetic problems we all face.

Rediscover your youth with our micro-current facial and body treatments. The VITADERM 4000 uses micro-current to stimulate collagen and elastin production in your skin helping to firm areas of the face and body. It also encourages lymphatic drainage, which helps the body eliminate toxins that can lead to premature aging, and also helps to reduce the appearance of cellulite. Results are achieved without invasive methods and are free of pain, downtime, or harmful side effects.

WHAT IS MICRO-CURRENT?

Micro-current is a modality providing an electric current that is nearly identical to the electrical current the human body naturally produces on its own therefore not harming the body in any way. Micro-current therapy for the face, like Botox and lasers, is yet another example of a procedure which began as a medical treatment but has now been adapted for use in the cosmetic market place. Originally developed in the U.S. in the late 1980's, micro-current therapy was used to treat facial weakness in victims of Bell's palsy and strokes. These patients had muscles that were paralyzed on one side of the face causing a "lop-sided" effect. They were treated with micro-current and this treatment seemed to lift their faces helping them look closer to their former selves again.

ARE THERE ANY HARMFUL SIDE EFFECTS OR PAIN INVOLVED WITH TREATMENT?

There is usually no pain associated with this type of treatment, and it appears to be completely safe with no known side effects or risks. There is no inflammation or redness caused by micro-current, and no need to heal before seeing results, and absolutely no downtime. Most clients report a feeling of relaxation and an increase in energy following the treatment.

WHO CAN RECEIVE TREATMENT?

As long as you are generally healthy and don't have skin diseases or infection in the area treated, there are few reasons why patients should not undergo this treatment. However, patients may be unsuitable for treatments if they have a pacemaker, a history of heart problems, epilepsy, or problems with thrombosis. Although there is no evidence that this treatment is harmful for pregnant women, you would generally be advised to wait until after you have given birth before embarking upon a course of treatments.

HOW MANY TREATMENTS ARE NEEDED?

This can vary depending on each individual. Most clients usually see changes within 4 or 5 sessions, but between 10 and 15 is the average number of suggested treatments. Clients with greater aging effects such as severe neck sagging, deep creases, or distinguished crow's feet at the brow may need more sessions to achieve desired results on the face. Maintenance sessions are recommended every 4 to 6 weeks to maintain results after first round of therapy. Your cosmetic investment is preserved as long as you are receiving maintenance treatments. If this is stopped, you risk losing the muscle memory after about 6 months and will have to start a new treatment span again to regain the original, youthful look.
