NORVELL AIRBRUSH TANNING INFORMATION

Why choose Norvell?

- **NATURAL COLOR RESULTS FOR ANY SKIN TYPE**
Norvell formulations offer a beautiful instant bronze with a smooth transition to a natural looking DHA tan. Results are natural across a broad spectrum of skin shades and tones.
- **NOT JUST A TAN, IT'S A HEALTHY SKIN TREATMENT TOO!**
Skin firming formula builds and restores the skin's matrix reducing fine lines and wrinkles. Our highly concentrated antioxidant blend aids in the reversal of daily skin damage.
- **GUARANTEED FAST DRYING, NON-STICKY, STREAKFREE FORMULA**
- **NO "ORANGE" COLOR DEVELOPMENT & DHA NEGATIVE ODOR CONTROL**
- **LASTING RESULTS**
You can expect 5-7 days of gorgeous "just off the beach" color with proper maintenance. Even fading makes for complete satisfaction. Anyone can walk in and get an airbrush tan, but without proper prep and post care your air brush will not be as true a color and will not last as long. Following these steps assures you a natural looking tan that will last.

TIME TO PREP!!!!

1. **PREP 24-48 HOURS BEFORE YOUR SESSION (FOR BEST RESULTS 48 HOURS IS RECOMMENDED)**
 - A) Exfoliate, Exfoliate, And Exfoliate!!.....Your skin. I cannot over stress the importance of pre-session exfoliation to clear away and dry, dead skin cells. For best results use a PH Balancing exfoliate.
 - B) Avoid using bar soaps, high in PH, shower products or in shower moisturizers. These products can neutralize the DHA bronzing reaction within the skin.
 - C) Any waxing, sugaring, or shaving should be completed 24 hours prior to your session.
2. **DAY OF SESSION**
 - A) **Don't create sunless barriers.**
 - a. You don't want to apply anything to the skin that may act as a barrier between the sunless solution and the skin. Deep penetration is the key to beautiful lasting color. Do not apply lotions, creams or perfumes prior to session. Use deodorant if needed sparingly, if you can go without do so.
 - B) **REMOVE ANY MAKE UP PRIOR TO SUNLESS APPLICATION.**
 - C) **WEAR LOOSE FITTING DARK CLOTHING AND REMOVE JEWELRY.**
 - b. Tight clothing can run or smear bronzers, especially around the knees, elbows, waist and chest / bra area.

NORVELL AIRBRUSH TANNING INFORMATION

3. IMMEDIATELY PRIOR TO SESSION

- A)** You will have a PH balancing spray (Xlatan) applied to stabilize the skins' PH and provide a moisture surge to the skin. Having the proper skin PH boosts DHA development, speeding result times and creating a deeper, darker tan. Having a stable PH combats the dreaded "orange effect".

4. AFTER SESSION CARE

- A)** Once dry, you will have post sunless spray (Hydrofirm) applied to refresh, hydrate and seal your sunless results boosting the DHA reaction.
- B)** Avoid water and sweating for at least 4 hours (for minimum results). The FULL darkness of the color will take 24 hours to process fully. Waiting as close to those 24 hours as possible for showering or getting wet is best but not required. A client waiting 8-12 hours is good, 12-16 is better and 16-24 hours is optimal.
- C)** When your chosen time is up only rinse off with warm water **ONLY! NO PRODUCTS USED DURING YOUR RINSE!!!!** Just let your skin air dry or pat very gently with a towel, (no rubbing your skin with the towel). Your color will fully appear 24 hours from you spray time.
- D)** After the 24 hours you make take a "normal" airbrush shower.
- a. NORMAL AIRBRUSH SHOWER
1. Use mild products, apply soap in hand not on a washcloth or sponge and no direct bar soap to skin!
 2. No exfoliation scrubs or sponges as they will take your tan away.
 3. Use warm water not too hot as it will dry out your skin
 4. Pat dry air dry no rubbing
 5. You may shave and shampoo
 6. Make sure to use a moisturizer after each shower to help extend your tan.

Your Airbrush Tan should not be in any way restricting just follow these tips to keep the tan at its best.

- Your tan is on the top layers of your skin so if you use a hot tub or chlorinated pool which will dry your skin, make sure to rinse off chemicals after and apply a moisturizer if you don't your tan is likely to fade faster due to dry skin.
- You can get a tan while you have the Norvell Airbrush Tan on but it does not have any protection from sun burning like a regular tan so make sure to wear SPF.
